

AI Web Agent for High-Intent Lead Qualification

Ashutosh Sharma

Problem

Business development teams in biotech struggle to identify **who actually has intent, budget, and relevance** among thousands of scientists and executives.

Solution

An AI-driven web agent that:

- Identifies relevant professionals from scientific and industry signals
- Enriches profiles with role, location, funding, and intent indicators
- Ranks leads using a weighted “Propensity to Buy” score (0–100)

Data Sources

- Scientific Publications (PubMed)
- Conference-style datasets
- Funding & technographic signals (scalable to Crunchbase / LinkedIn APIs)

Scoring Logic

Leads are ranked based on:

- Role relevance (decision-makers)
- Scientific activity in liver toxicity & 3D models
- Funding readiness
- Geographic innovation hubs
- Openness to New Approach Methodologies (NAMs)

Output

- Dynamic, searchable dashboard
- Exportable CSV for CRM integration
- Clear separation of person location vs company HQ

Impact

Enables BD teams to focus on the **top 5–10% of leads with real buying probability**, reducing wasted outreach and accelerating partnerships.
